

- Nitrogen rich blend of yard and food residuals processed locally at a DNR-permitted facility
- Regenerates soil by improving aeration, increasing water retention, buffering Ph, and adding organic matter
- Provides necessary nutrients and moisture when placed around the base of trees and plants
- Tested quarterly to ensure product is safe and free of weed seed
- Meets US Composting Council "Seal of Approval" and Organic Materials Review Institute (OMRI) requirements to ensure not only a quality product but a safe one
- Certified for organic production, vegetable and flower gardening, use around trees and shrubs, and lawn application

Successful gardens depend on the health of the soil
